Small Area Health Indicators - Data Tables

Public Health Research Analytics and Methods for Evidence

March 2024

Acknowledgment of Country

Sydney Local Health District acknowledges that we are living and working on Aboriginal Land. We recognise the strength, resilience and capacity of Aboriginal people on this land. We would like to acknowledge all of the traditional owners of the land and pay respect to Aboriginal Elders past and present.

Our District acknowledges Gadigal, Wangal and Bediagal as the three clans within the boundaries of the Sydney Local Health District. There are about 29 clan groups within the Sydney metropolitan area, referred to collectively as the great Eora Nation. Always was and always will be Aboriginal Land.

We advise this resource may contain images or names of deceased persons, including photographs or historical content.

About us

Public Health Research Analytics and Methods for Evidence (PHRAME) is a collaboration between Sydney Local Health District and the University of Sydney. In 2022, the District and the University established PHRAME to embed research-informed epidemiological and data science methods to:

- support production of actionable evidence for decision-makers
- add value to a wide range of health and population data through novel uses
- create opportunities for capacity-building and training
- enable scalable research and collaboration by identifying applications within and outside the district

PHRAME's vision is to be an exemplar of excellence as a partnership with the University, supporting the district's strategic vision of excellence in health and healthcare for all. This will be achieved by:

- producing actionable evidence to inform decision-making across the district
- applying research-honed methods and analytics to address real-world questions

For additional information, please refer to the PHRAME strategic plan.
